OrderSpark

Hiring Process and Vue Test

Process

Thank you for interviewing with OrderSpark, we're going to be the future of eCommerce online store builders. This is our hiring process and a quick Vue test.

Step 1: First please take the test, when you're done, create a public repository with your name, add to GitHub and send the link to us, for review.

Step 2: Video interview with Alex the founder.

Step 3: Video interview with Nikita our Vue developer or Priyank our back-end developer.

Please feel free to ask any questions.

(*test is below*)

Test

Use Vue.js or Nuxt.js, Vuex

Create a simple page containing a product (a picture with a price). Product can be anything you like. It should be possible to add these items to the cart. It should be possible to view the cart in a modal window and remove products from it.

Optionally and will be a plus the right candidate:

- use localStorage to save\remove products
- adaptive for mobile devices
- carousel with products

Everything should be done on the front end and a front-end process.

Final Step: Please upload to Git, make the repository public and send to us for review. The repository should be named after you.

Note: Although you can make any choices you want. I really like the design concept and photography on Glossier (https://www.glossier.com)
